IMMUNISATION PASSPORT

This is an important document, please keep it safe.

Name

DOB

www.immunisation.ie
Introduction

The aim of this Immunisation Passport is to ensure you have a record of all your immunisations.

These records should include all

- **primary childhood immunisations,**
- **school immunisations,**
- **travel,** and
- **adult immunisations**

There are times when you may require other vaccines following an outbreak or for work or travel reasons. You can also record those vaccines in this booklet.

**Please bring this Immunisation Passport with you every time you attend an immunisation appointment.**
Please keep this booklet safe and bring it with you to every vaccination appointment.

**Post Vaccination Advice**

What common reactions can my child get after being vaccinated and what should I do?

<table>
<thead>
<tr>
<th>Common reaction</th>
<th>What to do</th>
</tr>
</thead>
</table>
| A fever is common after MenB vaccine at 2 and 4 months (Visits 1 and 2) | Give liquid infant paracetamol  
1. Give 2.5 mls (60 mg) at the time of the immunisation or shortly after.  
2. Give a second dose of 2.5 mls (60 mg) 4 to 6 hours after the first dose.  
3. Give a third dose of 2.5 mls (60 mg) 4 to 6 hours after the second dose.  
4. Give a fourth dose 4-6 hours after the third dose if your baby still has a fever. |
| Soreness, swelling* and redness in the area where the injection was given | Give paracetamol or ibuprofen to relieve aches and pains.  
Make sure clothes are not too tight or rubbing against the area where the injection was given. |
| Mild diarrhoea after the rotavirus vaccine | Give extra milk to drink.  
Wash your hands carefully after changing and disposing of your baby’s nappy. |
| Fever (over 39°C) | Do not overdress your baby.  
Make sure their room isn’t too hot.  
Give extra fluids to drink.  
Give paracetamol or ibuprofen to lower the fever. |
| Headache or irritability | Give paracetamol or ibuprofen to relieve aches and pains. |

* In school children this swelling can be from the shoulder to the elbow. This usually occurs within 2 days of the vaccination and gets better over 4 – 5 days. Antibiotics are not needed to treat this local reaction.

- The dose of paracetamol or ibuprofen recommended for your child is written on the bottle according to the child’s age.
- Please ask your pharmacist for sugar-free paracetamol or ibuprofen suitable for your child’s age.
- Using paracetamol or ibuprofen over a long period without advice from a doctor may be harmful.

If your child received the MMR vaccine they may get a rash 6-10 days later (mini measles). This is not contagious.
